

Technical Cleaning - Media & Broadcasting

Why is cleaning important?

We have found that broadcasting equipment is often used in office environments, which are prone to dust build up and dirt, associated with people working in high pressure and intense environments (i.e. eating quickly at desks, in production control rooms and edit suites). Technical equipment is often not touched by inexperienced office cleaners, so this dirt builds up. Using an experienced specialist company, like IT Cleaning, will ensure your equipment stays clean and safe.

Our Experience

IT Cleaning have been working for the biggest names in broadcasting for many years. We carry out regular scheduled cleaning for ITN, BBC, Virgin Media and Sky. We clean all types of technical environments and broadcasting equipment. For example: Production control rooms (PCR), Media Manager Desks, Edit Suites, Apps Rooms, News Rooms, Archive facilities, Studios, Radio Rooms and Control Rooms.

We also look after broadcasting infrastructure for clients such as Red Bee Media who supply the BBC. We carry out fortnightly cleans of the Main Equipment Room at White City. We have provided validation services for Sky at their new facility in Brentwood.

What we can offer

We can survey your equipment and technical environments and provide you with quotations for tailored cleaning regimes, We are able to schedule work around your operational requirements.

Please feel free to contact us for more information, we can also provide details of people you can contact for a reference.
